Creating Book Trailers

Tutorial #2

Transferring Files from Your Computer to JayCut

Contents	Page #
Getting into JayCut	2-3
Transferring Files from Your Computer to JayCut	4-7
Using a Microphone or WebCam in JayCut	8-10
Display Settings in JayCut	11-12

Getting into Jaycut

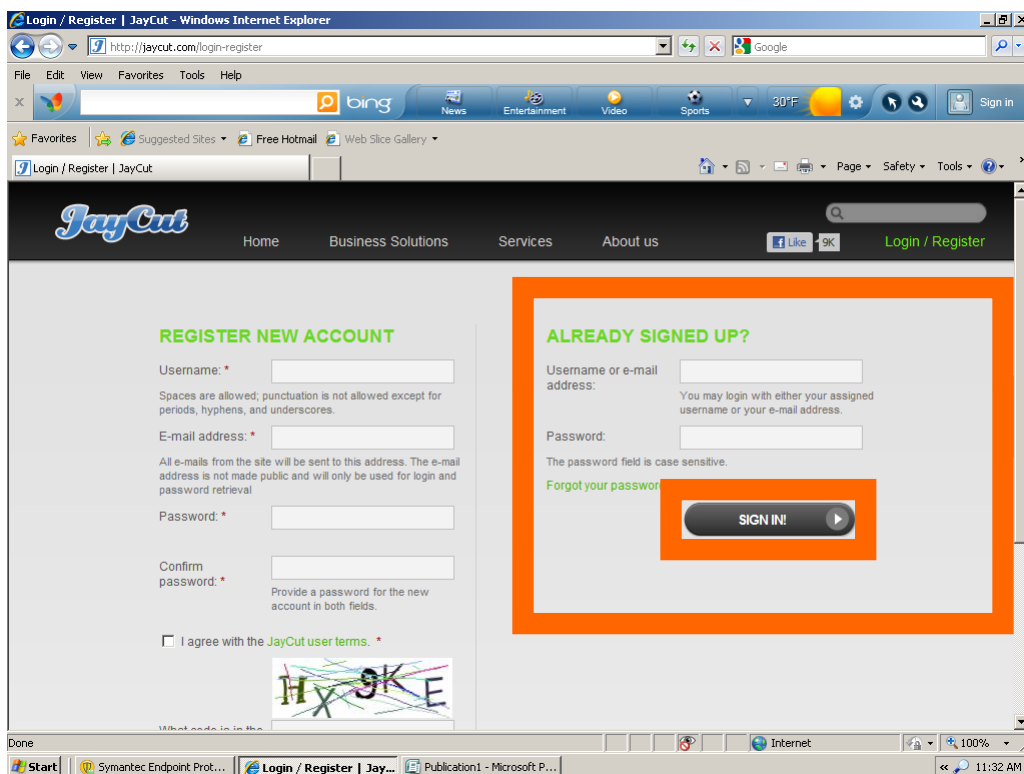

Step #1 Go to <http://www.jaycut.com>

Step #2 Click “Login/Register”

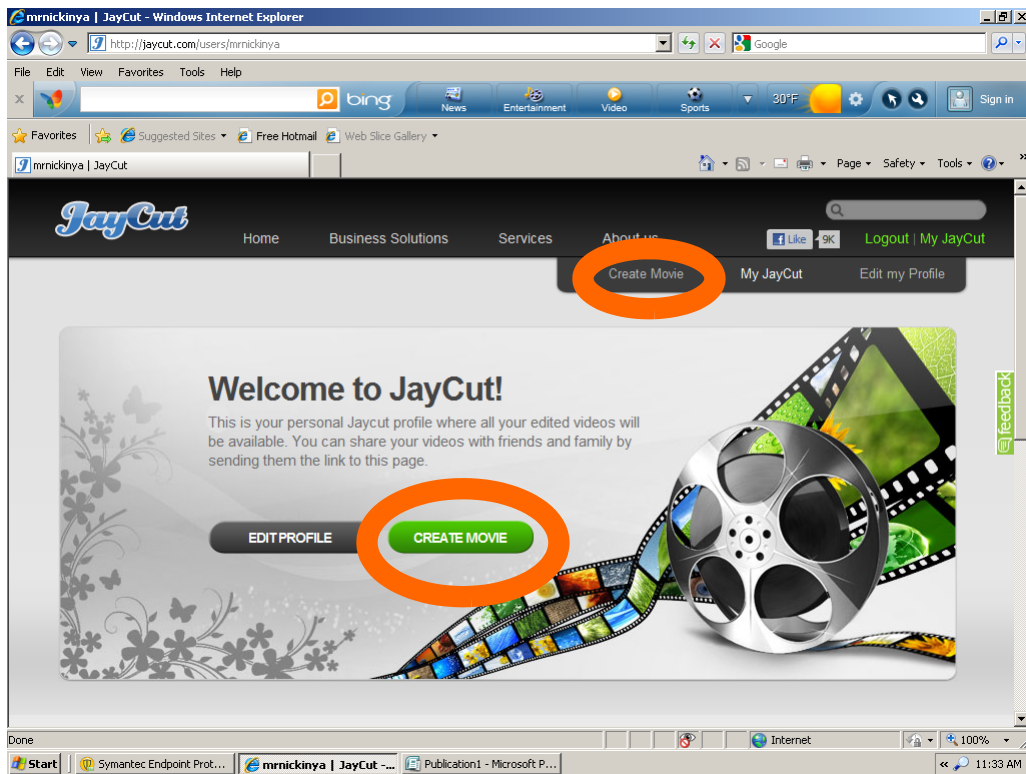

Step #3 Register on the left

Tip: Or if you are already registered, enter your username/email and password on the right and click “Sign In”

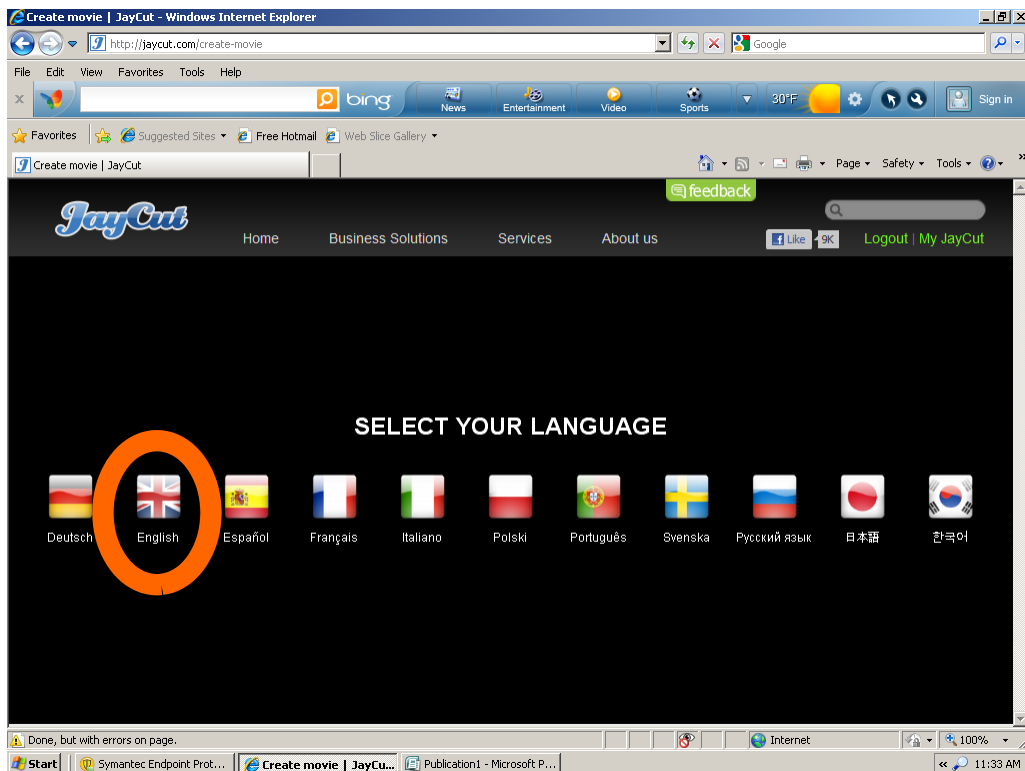

Getting into Jaycut

Step #4 Click “Create Movie” in either place

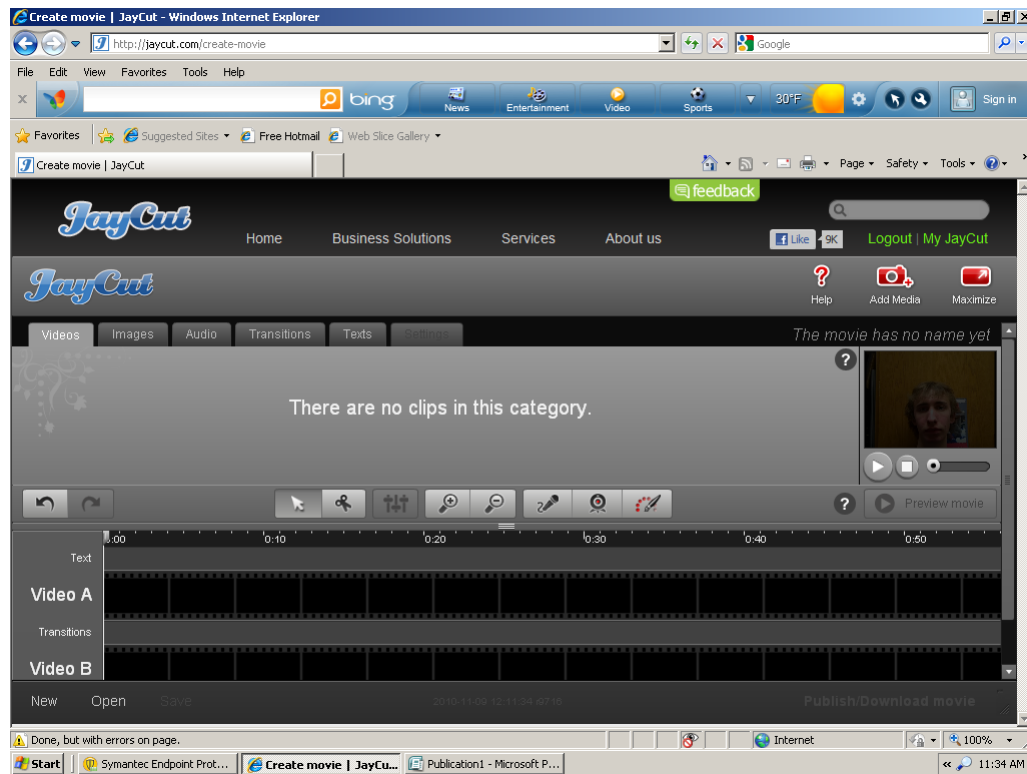

Step #5 Click your appropriate language

Tip: JayCut requires you to select your language each time you open JayCut

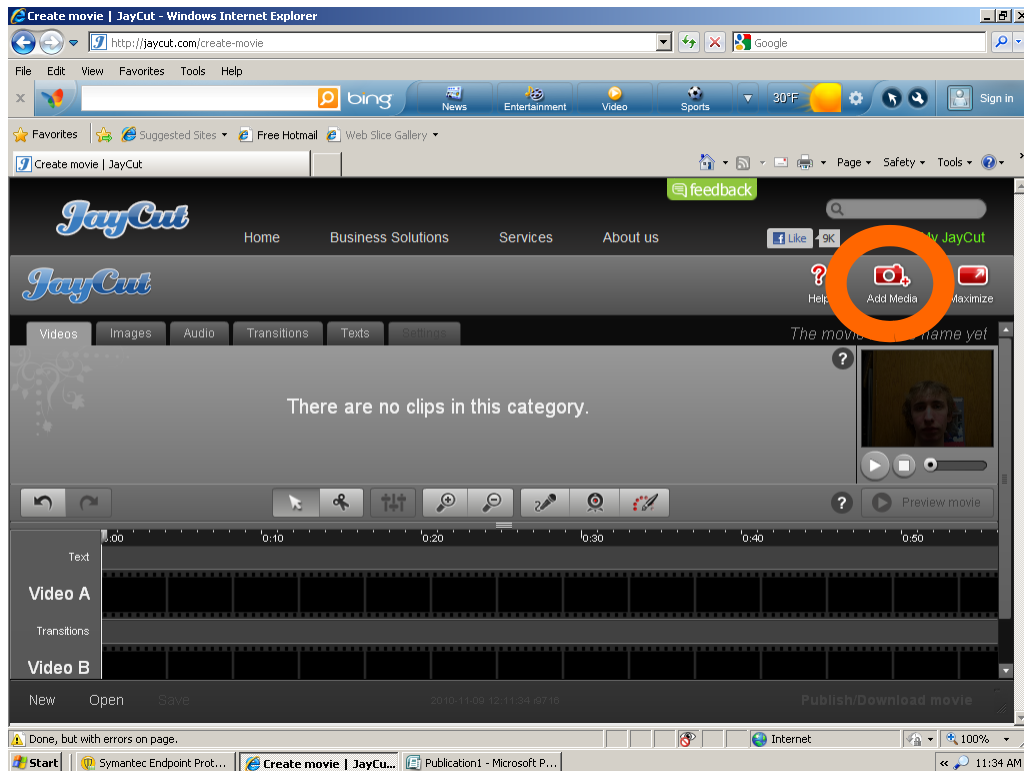

Transferring Files from your Computer to JayCut

Tip: This screen is where you will do your video editing later. We have no video files to edit at this point

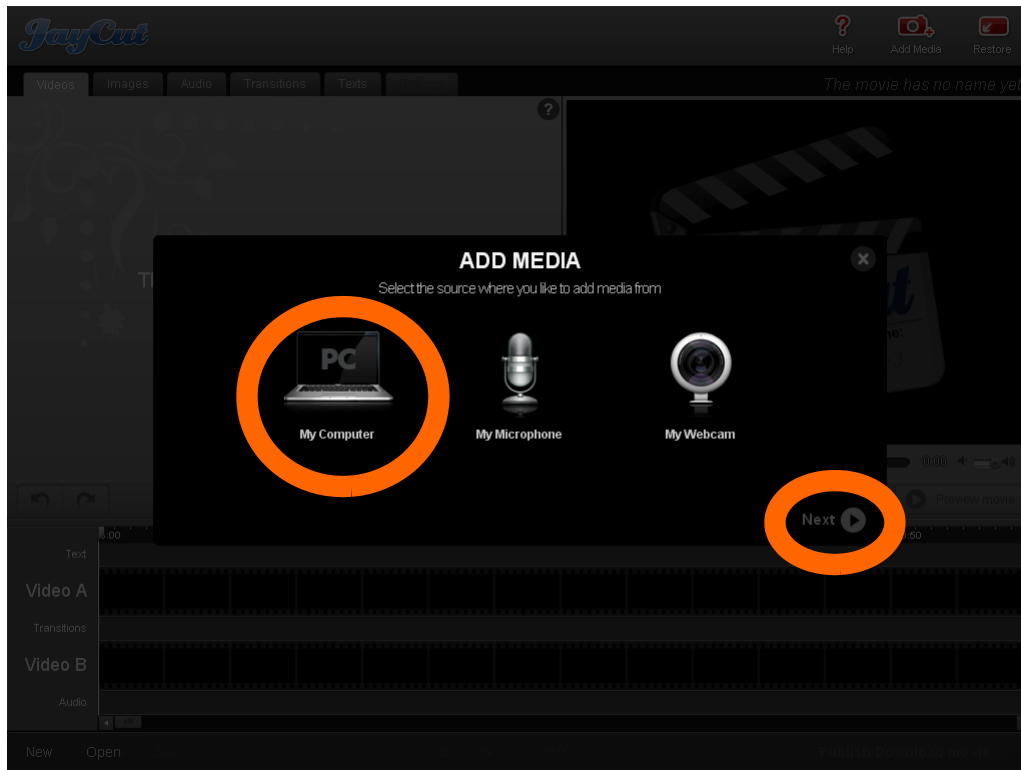

Step #1 To start making a movie, we need pictures, videos, and music to edit. To get some, click “Add Media”

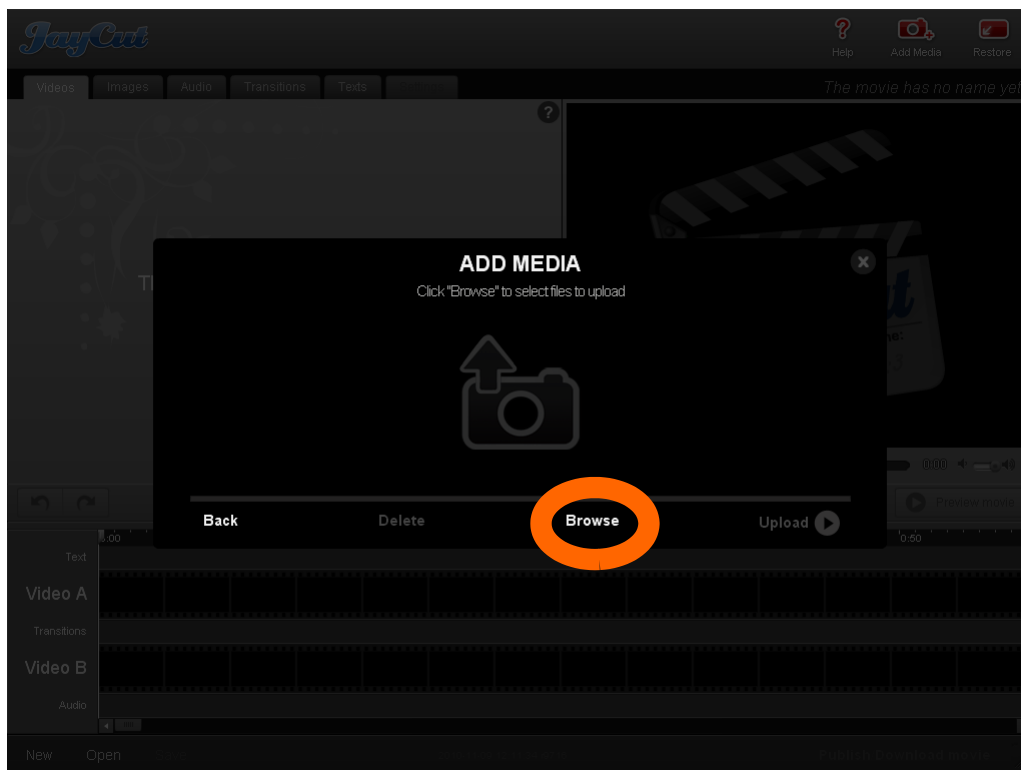

Transferring Files from your Computer to JayCut

Tip: You are given three options: you can record sound or movies directly into JayCut by clicking “My Microphone” or “My Webcam.” If you already have files on your computer, you can click “My Computer”

Step #2 Click “My Computer” then click “Next” (examples of “My Microphone” and “My Webcam” later in the tutorial)

Step #3 Click on “Browse”

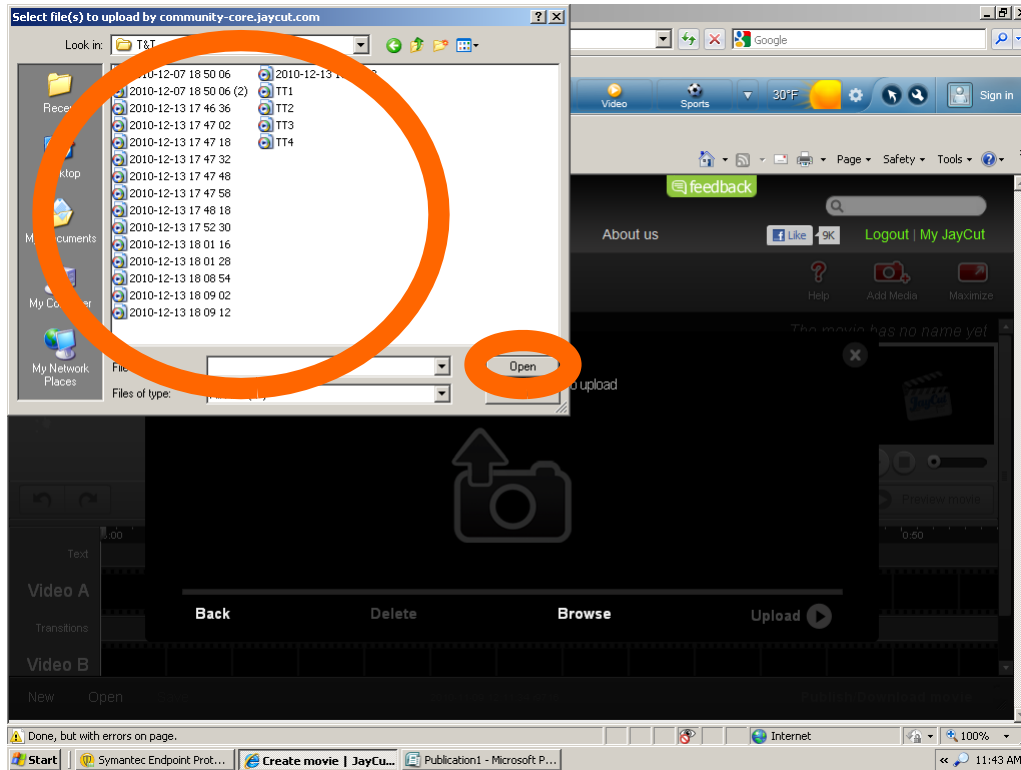

Transferring Files from your Computer to JayCut

Tip: The following dialogue box will appear

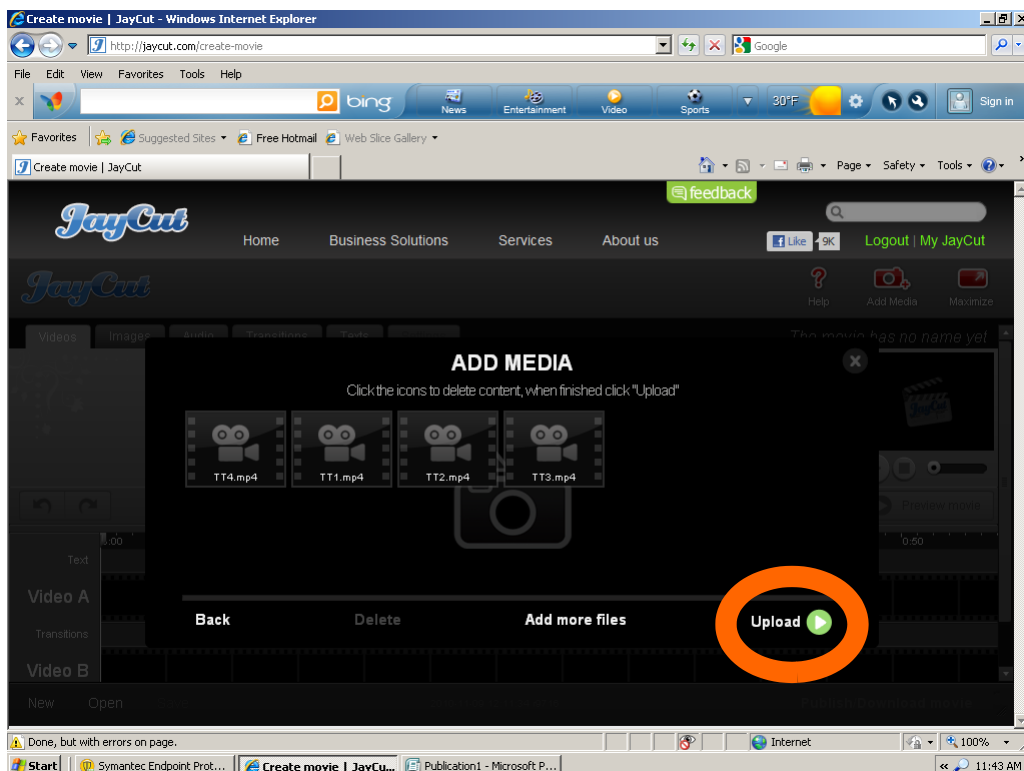

Step #4 Highlight the files you want to upload by clicking on them. These files can be videos, pictures, or music. If you want to select more than one to upload, use “Shift” or “Control” on your keyboard. Then click “Open”

Tip: The more files you open at one time, and the longer the individual files are, the longer it will take the files to upload to JayCut

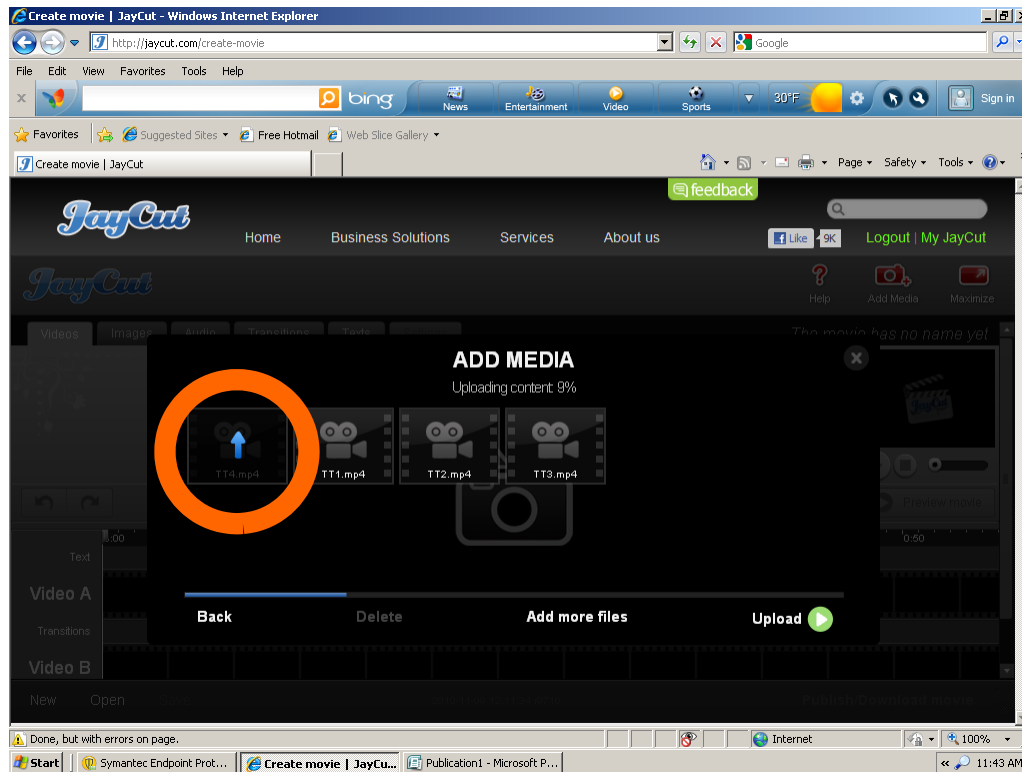

Tip: You have now selected the files you want to upload to JayCut

Step #5 Before they will appear in the editor, you have to click “Upload”

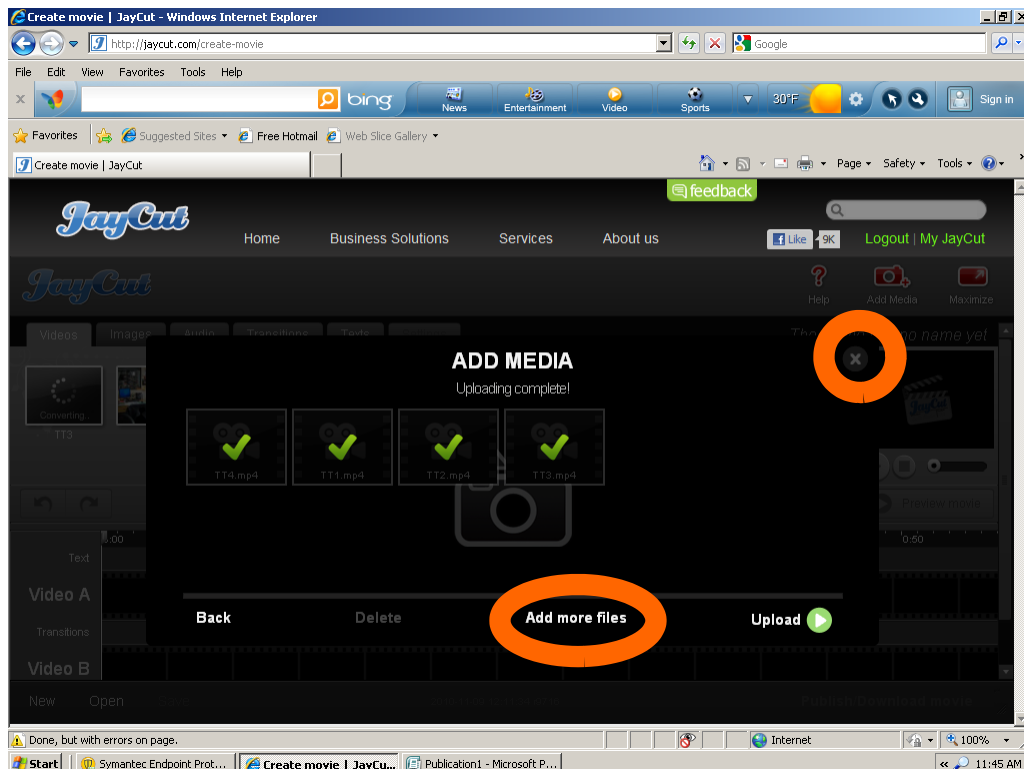

Transferring Files from your Computer to JayCut

Tip: The file with the blue arrow is uploading at that time

Tip: When a file is finished being uploaded, it will have a green checkmark in it

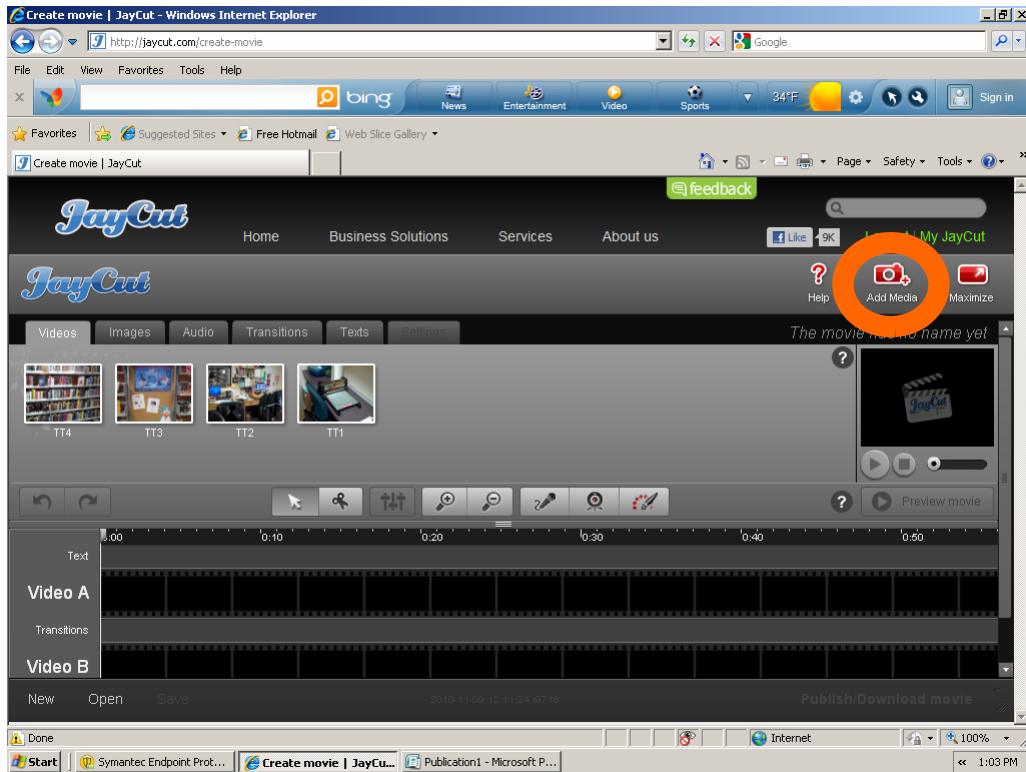

Tip: You then have the option to “Add more files” which will lead you back to the previous page, or if you have all the files you need, you can click the “X” to go back to the editor. You now have files to edit in JayCut

Using a Microphone or Webcam in JayCut

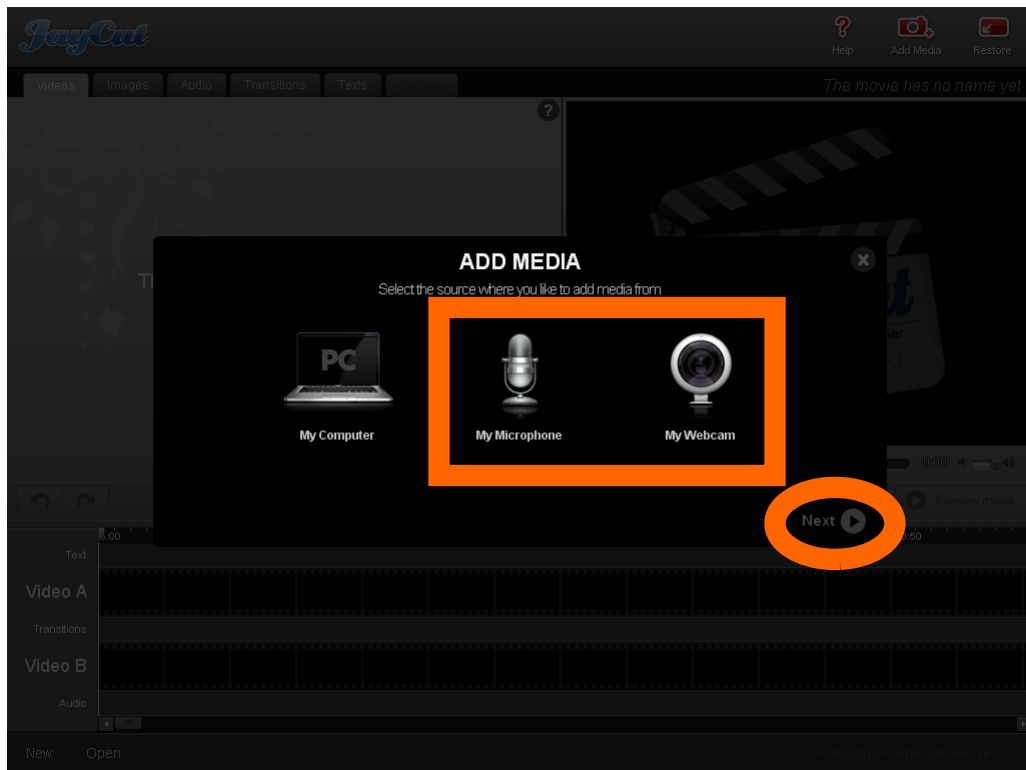

Tip: Instead of uploading files you already have on your computer, you can also create files using “My Microphone” and “My Webcam” in JayCut

Step #1 Click “Add Media”

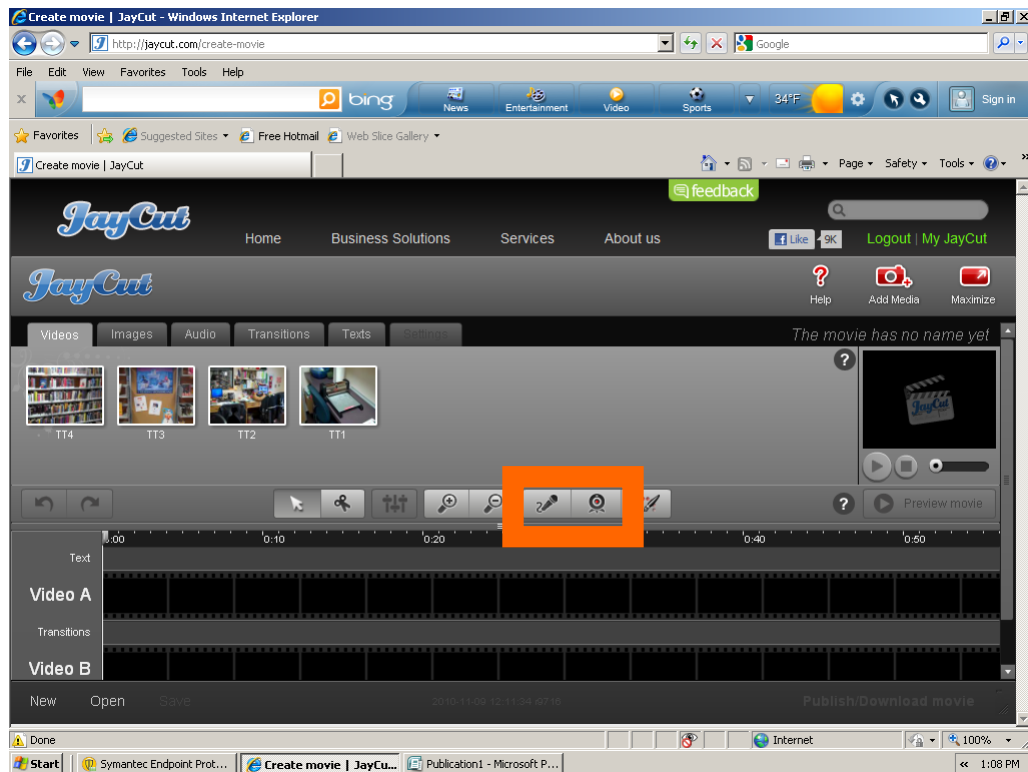

Step #2 Click “My Microphone” or “My Webcam” and click “Next”

Step #3 The steps for both are the same, so for this tutorial we will use “My Microphone”

Using a Microphone or Webcam in JayCut

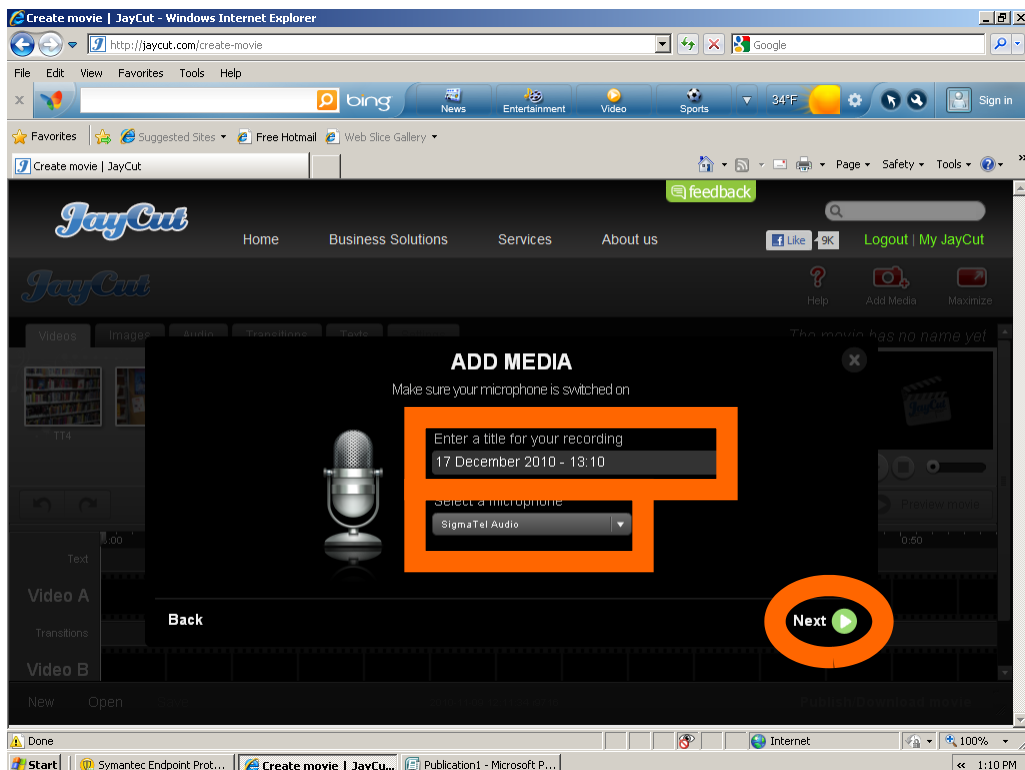

Tip: Instead of clicking “Add Media” and then choosing “My Microphone” you can click the “Microphone” or “Webcam” icons in the editor

Step #4 Whichever way you choose to go, this screen should pop up. Name your audio recording by clicking in the bar under “Enter a title for your recording”

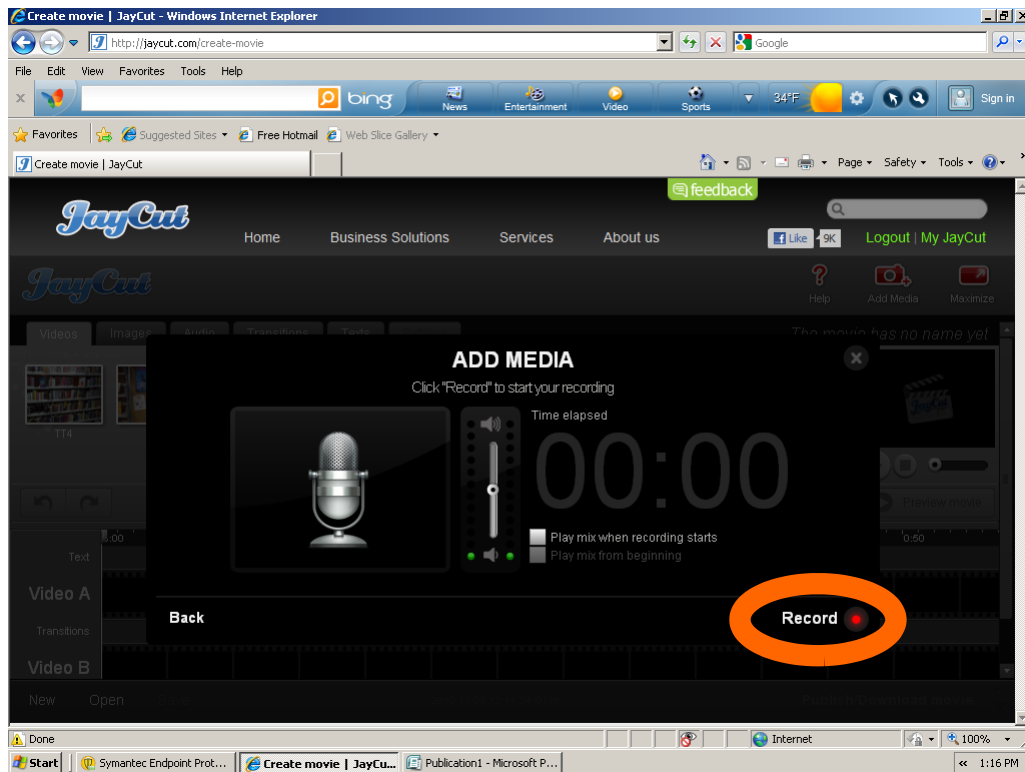

Tip: JayCut should automatically find a microphone or webcam that is plugged in. It should appear under “Select A Microphone”

Step #5 Click “Next”

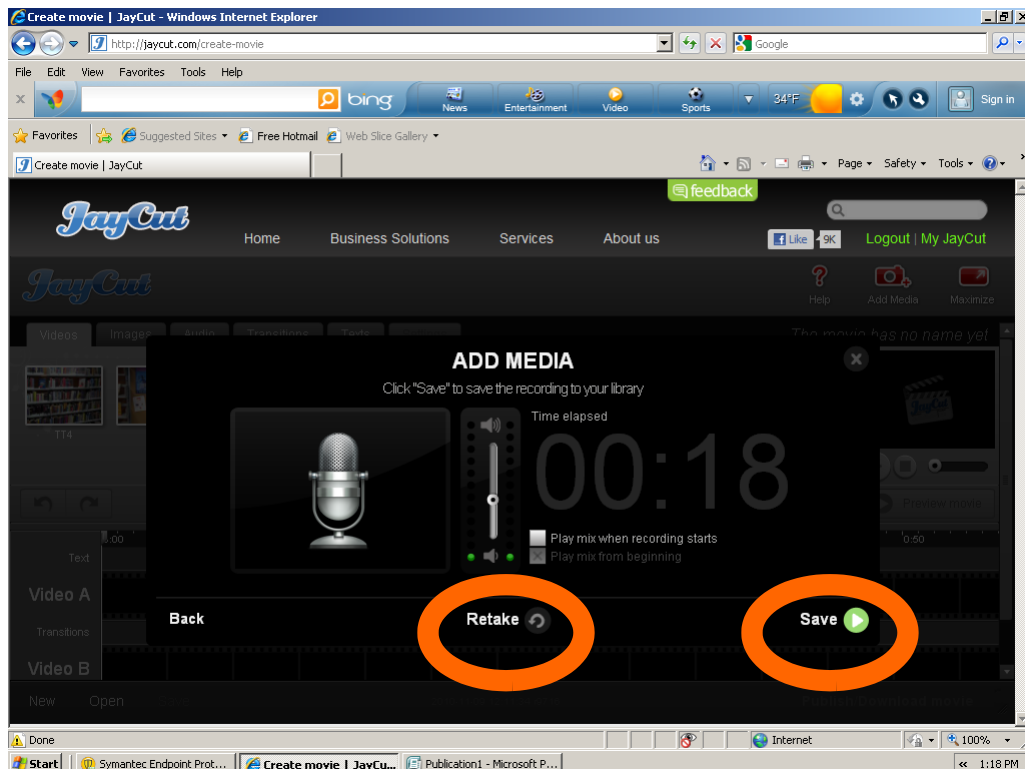

Using a Microphone or Webcam in JayCut

Step #6 Hit “Record” and start talking

Tip: You have the option to “Save” the recording if its what you wanted, or “Retake” it if it wasn’t quite right
Step #7 Clicking “Save” will automatically place the file into JayCut

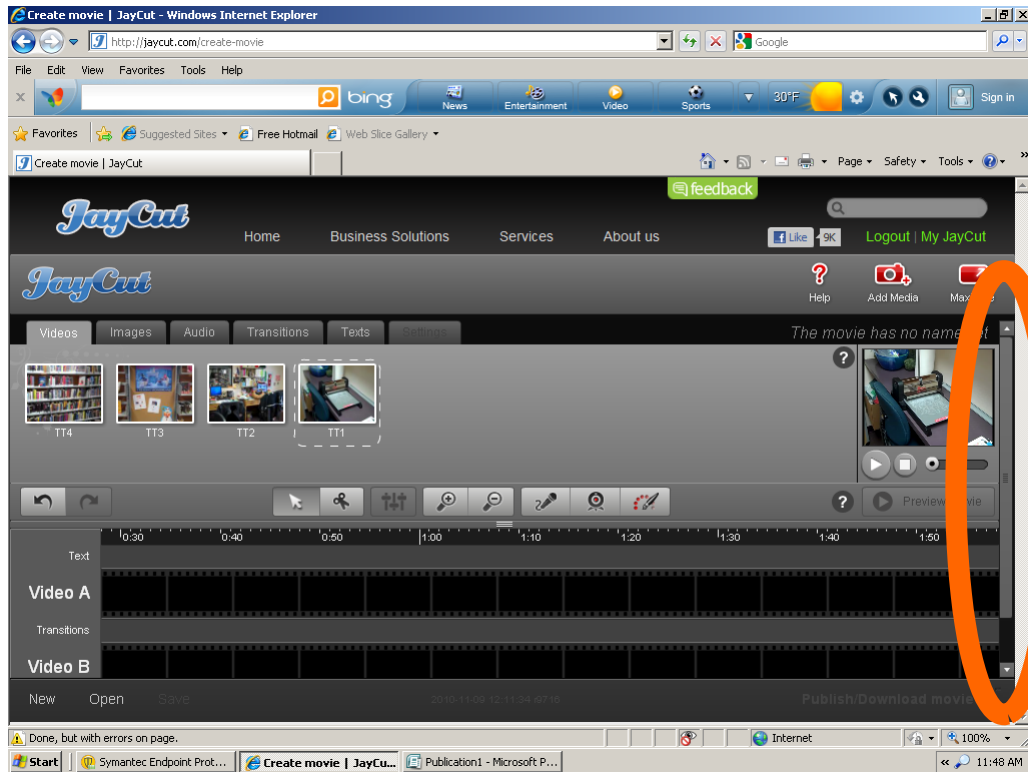

Tip: The “Webcam” icon will have the same steps as the “Microphone” icon

Display Settings in Jaycut

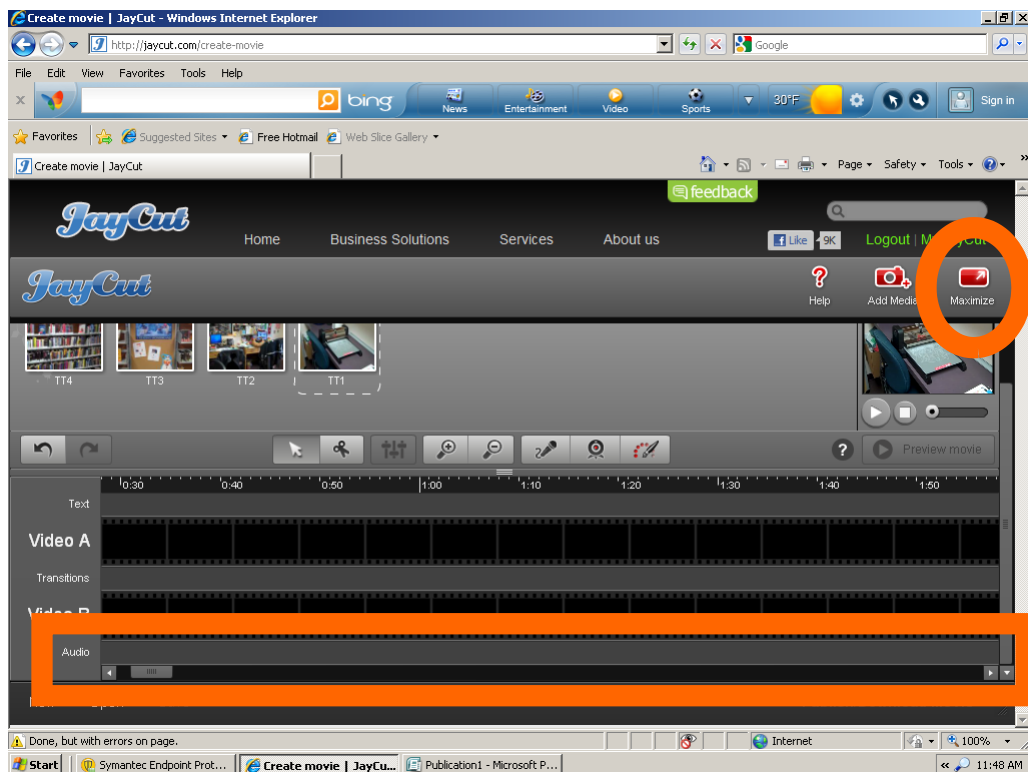

Tip: Depending on your computer's display settings, the un-maximized editor might not entirely fit on your computer screen

Tip: The scroll bar on the side will allow you to see the rest of the editor

Tip: This is what the editor looks like when you scroll. There is an “Audio” bar and a horizontal scroll bar that we couldn’t see before

Tip: If you don’t want to scroll, you can “Maximize” the window so it is easier

Display Settings in Jaycut

Tip: This is what the maximized editor will look like

Tip: The maximized and un-maximized displays of the editor have the same tools

Tip: You can either press “Esc” on your keyboard, or “Restore” on your screen to exit the maximized editor.

Tip: The pop-up in the center of the screen will disappear after a few seconds
